

ReGen: Interact Softphone

INTERACT SOFTPHONE

The new Interact Softphone includes all the features of Interact software client — engineered to integrate with the award-winning Verge deskphones — without the need for any phone hardware at all. Now you can work remote with just your laptop — plus all the features that make it so easy to work well, such as a flexible, feature-rich user interface with current call status, call history, call recording, busy lamp field indications, presence setting capability and presence status of other users. Take advantage of the integration features including easy access to internal and external contacts, Microsoft Outlook, receive Salesforce screenpops and dial out using the application database, and much more. It's easy to use and very powerful, with features like Click to Dial, drag and drop functionality — users can even use the recently introduced Park to Extension feature by dragging and dropping calls onto a specific extension. And one softphone license covers you — whether you're on the road with a laptop or in the office.
